Work authorization: Student residence permit with work rights

SUMMARY

Aspiring Product Manager with 2+ years of experience owning client-facing web products from discovery to launch, across e-commerce, healthcare, and regulated-industry (SEBI-compliance) domains. Comfortable translating ambiguous, non-technical requirements into scoped, buildable features, and working directly with founders and clients as both requirement-owner and developer. Currently completing an M.Sc. in Computer Science in Berlin and seeking an Associate Product Manager or Product Management internship.

EXPERIENCE

Junior Associate, Website Developer | AffinityX | Pune, India

Jul 2022 – Jun 2023

- Managed feature development across multiple client web applications via JIRA, working within an agile product delivery workflow.
- Translated client requirements into development tasks, coordinating with design and QA to keep delivery aligned with business and user experience goals.
- Contributed to SEO strategy and on-page optimization to support organic discoverability and growth.

Junior Solutions Developer (Technical Product Owner, Client Projects) | Pentablue | Mumbai, India

Jul 2021 – Jun 2022

- Owned end-to-end delivery of multiple concurrent client-facing web products, requirements gathering, solution design, build, and launch, balancing scope, timelines, and stakeholder expectations.
- Acted as the client-facing point of contact while also building the product myself, so there was no gap between what was scoped with the client and what shipped.
- Reviewed client briefs for gaps and proactively proposed additional features that improved usability, beyond what was originally requested.

Solutions Developer Intern | Pentablue | Mumbai, India

Jan 2021 – Jun 2021

- Engaged directly with clients to gather requirements and define feature scope for custom web applications, bridging business needs and technical delivery.
- Proposed product enhancements beyond initial briefs, identifying opportunities to improve usability.
- Delivered web product solutions independently, gaining hands-on experience across the full product development lifecycle from discovery to deployment.

Cashier (Part-time) | REWE | Berlin, Germany

August 2025 – Present

- Handle daily customer service in German at point of sale, including questions, complaints, and peak-hour volume.
- Built practical, day-to-day fluency in German customer communication and workplace norms.

SELECT PRODUCT PROJECTS (Client Work, Pentablue)

Physio Craft – Dual-Track Appointment Booking System

Product Owner (also developer) | 8 weeks, design to launch

- Found through stakeholder interviews (doctor and front desk) that a single generic booking flow was causing scheduling confusion, unpredictable wait times, and no limit on physician therapy load.
- Designed a dual-track booking flow that separated Consultation and Therapy visits, each with its own built-in slot duration, removing guesswork from front-desk scheduling.

- Introduced a configurable daily cap on therapy sessions to protect physician workload, and gave doctors a self-service way to freeze their own slots without contacting the front desk.
- Proposed further improvements to the patient journey (digital intake forms, pre-visit FAQ, self-serve rescheduling, home-exercise video dashboard) to reduce manual front-desk coordination.

[Thelootera.com – 0→1 Custom Accessories E-commerce Build](#)

Product Lead & Developer | 16 weeks, idea to launch

- Took a founder's business idea (personalized, custom-printed accessories) from concept to a live product with no existing team or system to inherit.
- Ran discovery with the founder to scope the initial catalog intentionally small (a subset of accessory types) so the core browse-customize-order experience could ship within the 16-week deadline.
- Coordinated design, development, backend, database, and content around one product definition, while building hands-on as a developer so scope stayed tied to what was actually feasible.
- Shipped on schedule, giving the founder a self-service storefront that no longer depended on manually handling every sale.

[Rossari Biotech – SEBI-Compliant Financial Disclosures Section](#)

Client Lead & Developer

- Translated a regulatory compliance requirement (SEBI disclosure obligations for a listed company) from a client conversation into a structured, buildable feature.
- Designed an information architecture organized by year and then quarter, matching how financial reporting actually works, so investors and analysts could find documents without learning a new system.
- Built a simple client-side upload path so Rossari's own team could publish new documents each quarter without agency involvement going forward.

EDUCATION

M.Sc. Computer Science | IU International University of Applied Sciences | Berlin, Germany

2023 – Present (expected October 2026)

Bachelor of Computer Applications | BMCC | Pune, India

2018 – 2021
